

# 每日获取arXiv 最新论文

利用GitHub Action，定时获取arXiv最新论文，并声称README.md文档。

步骤如下：

## 1. 新建GitHub项目，如arxiv-papers

### Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)

---

Owner \*

Repository name \*

 hao14293 ▾

/

arxiv-daily ✓

Great repository names are short and memorable. Need inspiration? How about [jubilant-system?](#)

Description (optional)

---

☒  **Public**

Anyone on the internet can see this repository. You choose who can commit.

☐  **Private**

You choose who can see and commit to this repository.

---

**Initialize this repository with:**

Skip this step if you're importing an existing repository.

☐ **Add a README file**

This is where you can write a long description for your project. [Learn more.](#)

☐ **Add .gitignore**

Choose which files not to track from a list of templates. [Learn more.](#)

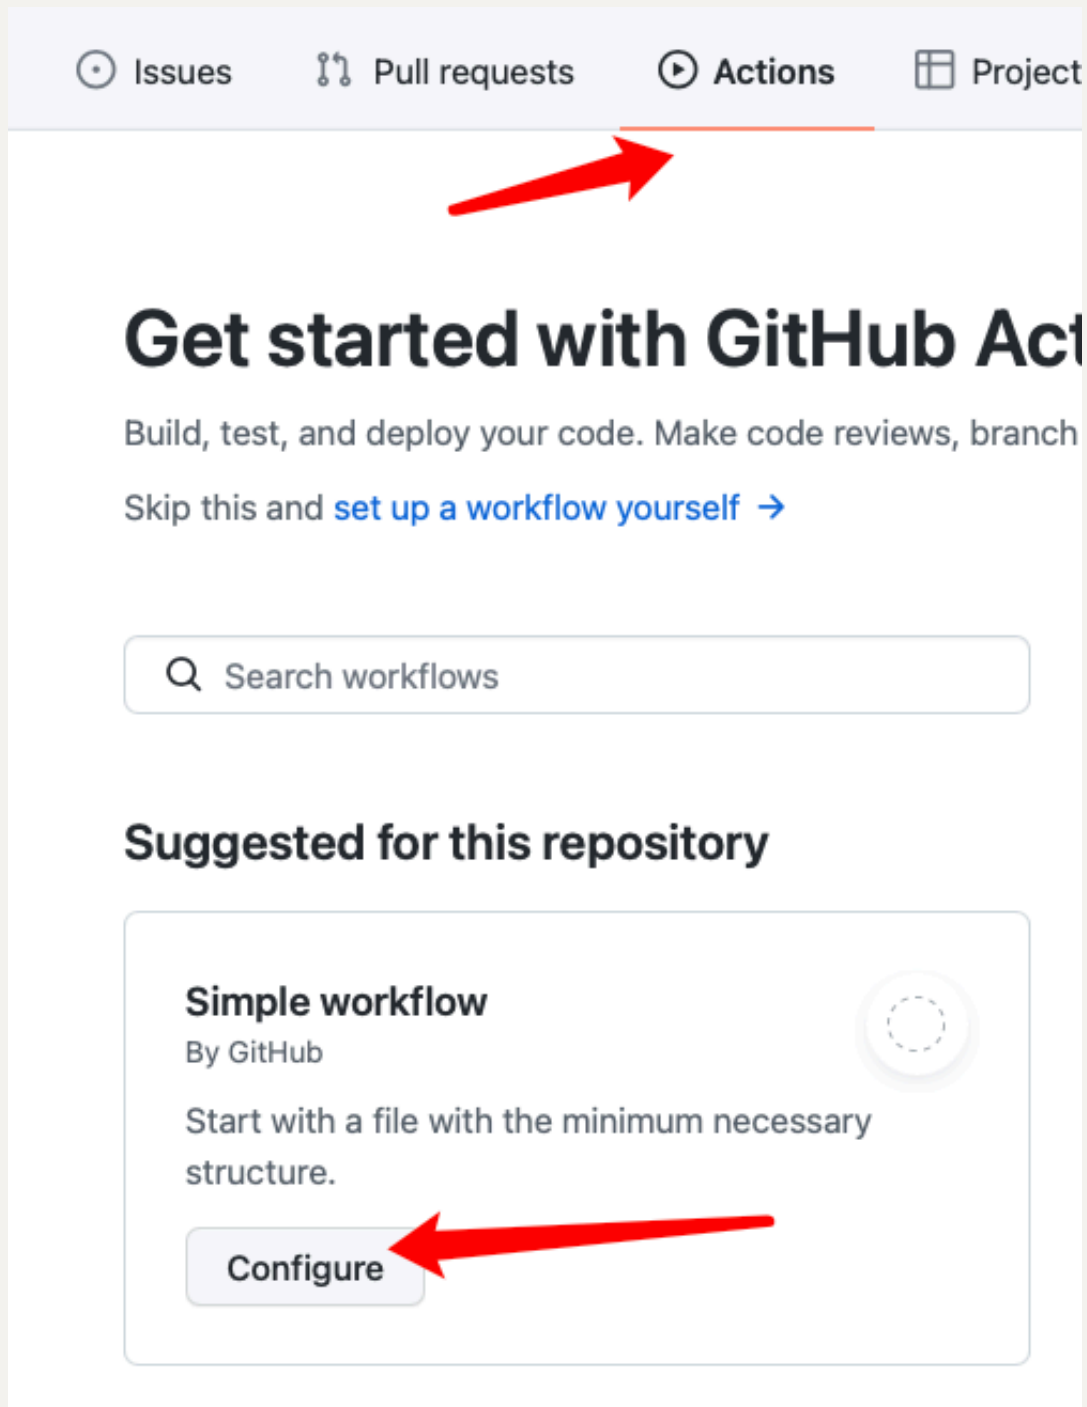

☐ **Choose a license**

A license tells others what they can and can't do with your code. [Learn more.](#)

---

Create repository

## 2. 点击如图 actions simpleworkflow 的Configure

### 3. 修改blank.yml文件

需要修改 GITHUB\_USER\_NAME 和 GITHUB\_USER\_EMAIL

我设置的每天8点更新，如果需要修改，修改 cron:

```
1 # name of workflow
2 name: Run Arxiv Papers Daily
3
4 # Controls when the workflow will run
```

```
5 on:
6   # Allows you to run this workflow manually from the Actions tab
7   workflow_dispatch:
8   schedule:
9     - cron:  "* 8 * * *"
10 env:
11
12   GITHUB_USER_NAME: *** # your github id
13   GITHUB_USER_EMAIL: *** # your email address
14
15
16 # A workflow run is made up of one or more jobs that can run
17 # sequentially or in parallel
18 jobs:
19   # This workflow contains a single job called "build"
20   build:
21     # The type of runner that the job will run on
22     runs-on: ubuntu-latest
23
24     # Steps represent a sequence of tasks that will be executed as
25     # part of the job
26     steps:
27       - name: Checkout
28         uses: actions/checkout@v2
29
30       - name: Set up Python Env
31         uses: actions/setup-python@v1
32         with:
33           python-version: 3.6
34
35       - name: Install dependencies
36         run: |
37           python -m pip install --upgrade pip
38           pip install arxiv
39           pip install requests
40
41       - name: Run daily arxiv
42         run: |
```

```

42         python arxiv_daily.py
43
44     - name: Push new cv-arxiv-daily.md
45       uses: github-actions-x/commit@v2.8
46       with:
47         github-token: ${ secrets.GITHUB_TOKEN }
48         commit-message: "Github Action Automatic Update CV Arxiv
Papers"
49         files: README.md arxiv-daily.json
50         rebase: 'true'
51         name: ${ env.GITHUB_USER_NAME }
52         email: ${ env.GITHUB_USER_EMAIL }

```

#### 4. 在项目中上传 arxiv\_daily.py 文件

```

1  # 根据需要自己添加keywords
2      # 如 目标检测
3      keywords["cv"] = "object detection"
4      # 如压缩感知
5      keywords["cv"] = "compressed"
6      # 根据需要修改 每日获取的论文篇数，默认为10
7      getArxivPapers().run(keywords, 10)

```

arxiv\_daily.py文件如下

```

1  import datetime
2  import requests
3  import json
4  import arxiv
5  import os
6
7  base_url = base_url =
    "https://arxiv.paperswithcode.com/api/v0/papers/"
8
9  class getArxivPapers:
10
11      def __init__(self,
12                  json_fileName="arxiv-daily.json",

```

```
13         md_fileName="README.md"):
14     self.json_fileName = json_fileName
15     self.md_fileName = md_fileName
16
17     def get_authors(self, authors, first_author=False):
